

Assessment test for Senior Java developer

Requirements:

Create 3 microservices based on Gradle:

1. Spring Authorization Server which will act as a UAA server
2. Federated authorization server(apikey-auth-provider) which will be placed behind UAA server and receive API requests from UAA Server.
3. Test endpoint (Resource Server)

Workflow:

1. Rest client makes an API call to the UAA server.
2. UAA server makes a call to apikey-auth-provider. internal token is issued and returned back to UAA.
3. Internal token is returned back to Rest client.

Upload in Github ready code for a review.
